Mixed	4	-0.33%	50.0%	\$30.52

Multi-Agent Debate Analysis

Key Findings:

- Mixed signals show mixed results with negative average ROI (-0.33%) but positive median ROI (5.16%), indicating skew, and very small sample (n=4) limits insights.
- The high average ROI for Politicians is almost certainly skewed by the small sample size; a single, unusually successful trade could disproportionately influence the results.
- Director-dominant signals show solid performance with positive average ROI (5.69%), decent win rate (69.6%), and the largest sample (n=23), suggesting a potentially reliable signal.
- Officer-dominant signals underperform with negative average ROI (-2.28%), low win rate (42.9%), and small sample (n=7), suggesting weak predictive power.
- Politician-dominant signals show perfect win rate (100%) and high median ROI (5.93%), but sample size is extremely small (n=2), making results unreliable.
